

CLAIMS

1. A crossbrace clamp assembly for a handlebar comprising an elongate crossbrace formed at each end with a part-spherical knob, two clamps, one for clamping each knob to the handlebar at spaced apart locations, in which respect each clamp comprises two opposing clamp portions, each formed with a part-spherical recess for reception therebetween of the respective crossbrace knob, with a further recess having a part-circular cross-section for reception therebetween of the handlebar location at which it is to be fitted, and with at least one aperture, and at least one fastener for each clamp, which fastener, in use, engages through the apertures in the opposing clamp portions to clamp them to both the handlebar and the cross brace knob.
2. An assembly as set forth in claim 1 wherein each clamp portion is formed with two apertures, one adjacent each side of the part-spherical recess, and two fasteners are provided for each clamp for engagement through these two apertures in each opposing portion of each clamp so as to clamp them to both the handlebar and the crossbrace knob.

3. A motorcycle handlebar fitted with a crossbrace assembly  
as set forth in claim 1.
